kWh/Multi Function Range

SifamTinsley kWh Energy Meters for single phase and three phase MID and non MID energy monitoring applications with either direct connection or current transformer operated with built-in pulsed output or Modbus RS485 RTU for remote communication. Offering DIN Rail mounted and Panel mounted case styles for Electrical Energy Applications. These new generation modern design power monitoring meters that will measure and display electrical power quality parameters such as, voltage, current, power, active and reactive energy imported or exported. The Energy is measured in terms of kWh, kVarh, furthermore the Max demand current value can be measured over pre-set periods of up to 60 minutes.

MID (Measuring Instrument Directive)

Sifam Tinsley's full range of MID (Measuring Instrument Directive) Certified Electricity sub meters that have been certified by SGS who are the notified body for the MID approval process. MID is a European legislation and a legal requirement for applications where the sub meters are being used to invoice or bill for electricity consumption. MID was introduced in 2006 and as of 2016 replaced Ofgem. There are two parts to the MID certification, Annex B is where the meter itself undergoes certain tests such as accuracy, EMC and voltage impulse etc. Then there is Annex D this is the production process and traceability and our factory every year will be audited to insure it is up to standards with the required legislation. We launched our first MID certified product in 2014 and have our factory has been certified for the last 4 years. We have further enhanced our offerings and range to insure we are able to cover all applications.

1. Safety Instructions

The following safety instructions apply to all versions of the AP15-3CO-BI range of power meters:

Information for your own safety
necessitate further measures. However, it does contain information which must be read for your personal safety and to avoid material damages. This information is highlighted by a warning triangle and is represented as follows, depending on the degree of potential danger.

Qualified personnel
Operation of the equipment described in this manual may only be performed by qualified personnel. Qualified personnel means a person who has been authorised to commission, start up, ground and label devices, systems and circuits according to Safety and Regulatory standards.

Use for the intended purpose
The equipment must only be used for the application specified in the datasheet and the user manual.

Proper handling
The prerequisites for areliable operation of the product are proper transport, storage, installation and assembly, as well as proper operation and maintenance. When operating electrical equipment, certain parts of the equipment automatically carry dangerous voltages. Improper handling can therefore result in serious injuries or material damage. Use only insulating tools.

Do not connect while circuit is live (hot). Place the meter only in dry surroundings. Do not mount the meter in an explosive area or expose the meter to dust, mildew and insects. Make sure the used wires are suitable for the maximum current of this meter. Make sure the AC wires are connected correctly before activating the current/voltage to the meter. Do not touch the meter connecting clamps directly with your bare hands, with metal, blank wire or other material as you may get an electrical shock.

Make sure the protection cover is placed after installation. Installation, maintenance and reparation should only be done by qualified personnel. Never break the seals and open the front cover as this might influence the functionality of the meter, and will avoid any warranty. Do not drop, or allow physical impact to the meter as there are high precision components inside that may break.

Meter to CT RJ12 Cable

Pre-wired looms ensure an error-free install!

Instead of using traditional terminals, the RJ12 cable is a proven method of connecting the meter to the current transformer significantly quicker; eradicating human error.

Three-in-one Current Transformers are particularly popular due to the ease of installation. The CT is clearly labelled so that it is installed the right way round, and the CT to Meter RJ12 cable ensures an error-free connection. Single phase RJ12 Current Transformers are also available for 1P2W installations.

Voltage to Fuse Loom

Quick and easy to connect, no auxiliary!

The pre-wired plug of the Voltage to Fuse loom clicks into the AP15-3DL meter and has open tails on the other end for connection to the appropriate fused breaker.

The AP15-3DL has an intelligent self-supplying auxiliary which draws power from any available phase connected, this guarantees that the meter stays powered and recording if one of the connected phases fails.

AP25-3 Panel Kit for DIN Rail Power Meter

Features

- Cost effective solution for Panel Mounted MID Approved Multifunction Meter
- Fits within a 92mm² cutout
- Detachable fascia to access Screw terminals from the front
- Quick Installation

AP15/AP25 Panel Adaption Kit

This Panel Kit has been engineered to work with the following models from the Sifam Tinsley range:

- AP25-3CO
- AP25-3DO

We have manufactured this as a cost effective solution for a MID approved multifunction panel-mounted meter.

This cradle has been designed for a quick & easy installation as opposed to similar products available.

Specification

The AP25-3CO Panel Kit provides a solution to a MID approved multifunction meter. This Panel Kit works in comparison with the AP15-3** or AP25-3** MID Power Meter which comes as a Dinrail mounted meter. The Panel Kit acts as a cradle which holds the Dinrail meter securely in place, the fascia of the Panel Kit creates a 96mm² fascia. The AP25-3CO Panel Kit consists of two separate components making it practical, fast and easy to install.

When installing the AP25-3CO meter using the Panel Kit, you will notice clips on either side, this is so that once the Panel Kit is pushed into the 92mm² cut out, the clips hold the cradle in place securely.

The reason for the separate front plate is so that when the meter is held securely within the cradle, the terminal screws are still accessible at the front of the meter without having to remove it from the Panel Kit. This allows for an easier wiring solution for setup and any adjustments.

Once the meter has been wired in place, the front plate can be clipped on, allowing the screen of the meter to be visible within the 96mm² square panel enclosure. Due to the AP25-3CO meter featuring touchscreen buttons, the user can cycle through all parameter options whilst the meter is secured within the Panel Kit.

Sifam Tinsleys AP35-3RJ12 is a new generation modern design power monitor that will measure and display electrical power quality parameters. It has been engineered to cover most applications (Single Phase and Three Phase networks / Built in Pulsed and RS485 Modbus / Import and Export kWh), replacing the need for several different models of this power meter.

For ease of installation, this meter features RJ12 connectors. This is the quickest, most efficient way of connecting the meter to the current transformer. As the demand for MID certified meters has increased, we have obtained annex B and D of the EC Directive 2004/22/EC. This power meter has been tested and certified for single or three phase networks and import and export active energy (kWh).
