Alpha 20 is a compact multifunction instrument which Measures important electrical parameters in 3 phase 4 Wire and 3 phase 3 Wire Network & replaces the multiple analog panel meters.

1. Application

Alpha 20 measures important electrical parameters in 3 phase 4 Wire and 3 phase 3 Wire Network & replaces the multiple analog panel meters. It measures electrical parameters like AC Voltage, AC Current, Frequency, Active, Reactive, Apparent Power, Import Export Energy & many more.

2. Product Features

On site programmable PT / CT ratios	It is possible to program primary of external potential Transformer (PT), primary of external Current Transformer (CT) on site via front panel keys by entering into Programming mode.	Onsite selection of Auto scroll / Fixed Screen	User can set the display in auto scrolling mode or fixed screen mode using front panel keys.
User selectable CT Secondary 5A/1A	The secondary of external Current Transformer (CT) can be programmed on site to either 5A or 1A using front panel keys.	Optional Pulse Output / Limit switch (Relay output)	The instrument can be programmed as Pulse output or Limit switch.
User selectable PT Secondary	The secondary of external Potential Transformer (PT) can be programmed on site from 100VLL to 500VLL using front panel keys. User can set the display in auto scrolling mode or fixed screen mode using front panel keys.	Pulse Output	The optional pulse output is a potential free, very fast acting relay contact which can be used to drive an external mechanical counter for energy measurement.
Low back depth	The instrument has very low back depth (behind the panel) of less than 55 mm (Without output option).	Limit Switch	The instrument will trip the relay if the programmed parameter exceeds the programmed Trip Limits.
Four function keys	Using the four function key, it is possible to go desired parameter screen instantly.	Optional MODBUS (RS485) Output	The optional Modbus output enables the instrument to transmit all the measured parameters over standard MODBUS (RS485).
	Measures & Displays Current Demand, kVA Demand, kW Import Demand, kW Export Demand. Any of the parameters can be assigned to optional Limit switch.	Configuration of Instrumnet via MODBUS	The instrument setting can be configured locally via front panel keys by entering into the programming mode or rometely via MODBUS (Rs485). Note: The MODBUS communication parameters can only be set locally via front panel keys in programming mode.
Demand Measurement	Measures & Displays Current Demand, kVA Demand, kW Import Demand, kW Export Demand. Any of the parameters can be assigned to optional Limit switch.	Storage of parameters possible	The instrument stores minimum and maximum values for System Voltage, System Current, Run Hour, ON Hour & number of Interrupts. Every 60 sec stored values are updated.
3 line 4 digits LED display	Simultaneous display of 3 Parameters.	Enclosure Protection for dust and water	Conforms to IP 50 (for front face) & IP 20 (for back) IP 65 (for front with seal) as per IEC60529.
RPM Measurement	The instrument display Rotation per minutes for generator applications. Number of poles can be set on site depending upon application requirement.	EMC Compatibility	Compliance to International standard IEC 61326.
Energy Count Storage	In case of power failure, the instrument memorizes the last energy count. Every 1 min, the instrument updates the energy counter in the non-volatile memory.	Interference Emission	IEC 61326-1 : 2005, Class A
User selectable 3 phase 3 Wire or 4Wire or Single phase Network	User can program on site the network connection as either 3 Phase 3 Wire or 4 Wire or single phase network using front panel keys. In case of self powered configuration either 3 Phase 4 wire or single phase network is available.	Interference Immunity	IEC 61326-1 : 2005
		Electrostatic discharge contact/air. (ESD)	IEC 61000-4-2 -- 4kV/8kV
		EM Field	IEC 61000-4-3 -- 10 V/m (80 MHz to 1 GHz) -- 3 V/m (1.4 GHz to 2 GHz) -- 1 V/m (2 GHz to 2.7 GHz)

Product Features Continued

True RMS measurement	The instrument measures distorted wave form up to 15th Harmonic.
Energy Measurement (Import & Export)	Active Energy (kWh), Reactive Energy (kVarh), Apparent Energy (kVAh). Any of the parameters can be assigned to optional Pulse output.
Programmable Energy format & Energy rollover count	Customer can assign the format for energy display on MODBUS (RS485) in terms of W, kW or MW. Additional to this, customer can also set a rollover count from 7 to 14 digits depending on the energy format, after which the energy will roll back to zero.
