PRECISION INSTRUMENTATION

**COMING
SOON**

is a proven solution for making the installation process of power meters into switchboard & distribution boards easy, reliable and error free.

- Up to 4 x Three-Phase Current transformer is connected into the meter via a flexible RJ12 Cable. The Current Transformer can be mounted for either orientation. The standard cable and reversible cable will correct not only the phase sequence but also the flow. There is no need to reprogram the meter.
- Fuse to voltage input ready-made cable for the voltage reference and power to the meter
- RS485 Modbus allowing the meters to be daisy chained back to a BMS or Energy Monitoring Solution
- In and out RJ45 Connection for daisy chaining modbus back to a centralised display (HMI) complete with built in ConneX software for on site analysis for multiple circuits
