THETA 40 PROGRAMMABLE MULTI-FUNCTION TRANSDUCER

SUBJECT TO CHANGE WITHOUT NOTICE

This datasheet superseded all previous versions – please keep for future reference

Product Features:

- For all heavy-current power system variables
- Up to 6 outputs (2A + 4D or 4A + 2D or 2A or 3A)
- Input voltage up to 693 V (phase-to-phase)
- Universal analogue outputs (programmable)
- Simultaneous measurement of several variables of a heavycurrent power system / full supervision of an asymmetrically loaded four-wire power system, rated current 1 to 6 A, rated voltage 57 to 400 V(phase to neutral) or 100 to 693 V (phase-to-phase)
- High accuracy: U/I 0.2%, Frequency 0.15% and P 0.25% (under reference conditions)
- Universal digital outputs (meter transmitter, limits)
- Up to 2 or 4 integrated power meters.
- AC/DC power supply/universal (24-60V AC/DC or 85-230V AC/DC)
- Provision for either snapping the transducer onto top - hat rails or securing it with screws to a wall or panel
- Windows software with password protection for programming, data analysis, power system status simulation, acquisition of meter data and making settings.

THETA 40 Programmable Multi-function Transducer

Application

for the measurement of electrical variables in heavy current power systems

The Sifam Tinsley MXX series of multi-transducers (Fig. 1) simultaneously measure several variables of an electric power system and process them to produce 2 or 3 or 4 analogue output signals. 2 or 4 digital outputs are available for signaling limits or power metering. For two of the limit outputs up to 3 measurands can be logically combined.

The multi - transducers are also equipped with an serial RS 232 interface to which a PC with the corresponding software can be connected for programming or accessing & executing useful ancillary functions. The usual modes of connection, the types of measured variables, their ratings, the transfer characteristic for each output etc. are the main parameters that have to be programmed.

Ancillary functions include a power system check, provision for displaying the measured variable on a PC monitor, the simulation of the outputs for test purposes and a facility for printing nameplates.

The outputs A, B, C and D may be either short or open-circuited. They are electrically insulated from each other and from all other circuits (floating)

All the full - scale output values can be reduced subsequently using the programming software, but a supplementary error results. The hardware full-scale settings for the analogue outputs may also be changed subsequently. Conversion of a current to a voltage output or vice versa is also possible. This necessitates changing resistors on the output board. The full-scale values of the current and voltage outputs are set by varying the effective value of two parallel resistors (better resolution). The values of the resistors are selected to achieve the minimum absolute error. Calibration with the programming software is always necessary following conversion of the outputs. Refer to the Operating Instructions.

Caution : The warranty is void if the device is tampered.

Digital outputs, pulse outputs, limit outputs →

The digital outputs conform to DIN43 864. The pulse width can be neither programmed nor is there a hardware setting.

Type of contact	Open collector
Number of pulses	see "Ordering information"
Pulse duration	≤100 ms

Description	M42	M24	M20	M30	M40	M00	M01
6. Full-scale output signal, output B						N.A.	N.A.
1) Output B, Y2 =20 mA (standard)						N.A.	N.A.
9) Output B, Y2 [mA] *						N.A.	N.A.
Z) Output B, Y2 [V] *						N.A.	N.A.
7. Full-scale output signal, output C						N.A.	N.A.
1) Output C, Y2 = 20 mA (standard)		N.A.	N.A.			N.A.	N.A.
9) Output C, Y2 [mA] *		N.A.	N.A.			N.A.	N.A.
Z) Output C, Y2 [V] *		N.A.	N.A.			N.A.	N.A.
8. Full-scale output signal, output D						N.A.	N.A.
1) Output D, Y2 =20 mA (standard)		N.A.	N.A.	N.A.		N.A.	N.A.
9) Output D, Y2 [mA] *		N.A.	N.A.	N.A.		N.A.	N.A.

9. Digital Output E							
Specify output i) Limit control or	N.A.		N.A.	N.A.	N.A.	N.A.	N.A.
ii) Pulse output	N.A.		N.A.	N.A.	N.A.	N.A.	N.A.
Also specify the parameter and their details separately							
10. Digital Output F							
Specify output i) Limit control or	N.A.		N.A.	N.A.	N.A.	N.A.	N.A.
ii) Pulse output	N.A.		N.A.	N.A.	N.A.	N.A.	N.A.
Also specify the parameter and their details separately							
11. Digital Output G							
Specify output i) Limit control or			N.A.	N.A.	N.A.	N.A.	N.A.
ii) Pulse output			N.A.	N.A.	N.A.	N.A.	N.A.
Also specify the parameter and their details separately							
12. Digital Output H							
Specify output i) Limit control or			N.A.	N.A.	N.A.	N.A.	N.A.
ii) Pulse output			N.A.	N.A.	N.A.	N.A.	N.A.
Also specify the parameter and their details separately							
13. Test certificate							
0) None supplied							
1) Supplied							
14. Programming							
0) Basic							
9) According to specification							
Line 0: Not available if the power supply is taken from the voltage input
