THETA M+ PROGRAMMABLE MULTI-FUNCTION TRANSDUCER

SUBJECT TO CHANGE WITHOUT NOTICE

This datasheet superseded all previous versions – please keep for future reference

Product Features:

- 4-in-1 programmable transducers
- Fast Response Time
- Measuring Input
- Best In Class Accuracy
- USB Communication
- RS485 Communication Interface
- Programmable Input/Output
- Compliance to International Safety standards
- EMC Compatibility

THETA M+ Programmable Multi-function Transducer

Application

Theta M+ transducer is used to measure and convert parameters of a single-phase or three-phase AC system with unbalanced or balanced load into a proportional load independent DC current or DC voltage output signal. It also provide digital output which can be configured for energy pulse output or limit output or timer output.

Salient Features:

- 4-in-1 programmable transducer
- Upto 4 Isolated Analog outputs
- True RMS and THD measurement upto 31st Harmonics
- Fast Response time < 300 msec
- Accuracy class 0.2 as per EN/IEC 60688
- Energy Measurement Class 0.5s as per 62053-22
- Fast and easy installation on DIN RAIL and Wall Mount
- Connection Terminal: Conventional Screw type

Product Features:

4-in-1 programmable transducers

Measurement parameters like voltage, current, power, frequency and many more can be configured to any analog or digital output. Digital output configurable to Pulse output, Limit output or timer output.

Fast Response Time

Analog Output response time is less than 300 msec.

Measuring Input

AC Voltage/Current input signal, sine wave or distorted wave form upto 31st Harmonics
Measurement of instantaneous values of more than 50 quantities (Voltage, Current, Power (W, VAR, VA), Power Factor, Phase Angle, Frequency, System and Per Phase Demand, THD, System and Per Phase Energy (Wh, VARh, Vah)).

Best In Class Accuracy

Transducer Class 0.2 Accuracy as per IEC 60688. Active Energy Class 0.5s as per 62053-22.

USB Communication

Transducer can be configured onsite using USB. USB is self-powered so device configuration is possible, both with and without auxiliary supply.

RS485 Communication Interface

Optional MODBUS RS-485 interface for monitoring and configuration purpose is also provided.

Programmable Input/Output

Transducer Input and Outputs can be programmed on-site using USB or RS-485 Interface.

Compliance to International Safety standards

Compliance to International Safety standard IEC 61010- 1-2010

EMC Compatibility

Compliance to International standard IEC 61326.

Symbols and their meaning

X	Input Parameter
	Voltage, Current, Powers, Power Factor, Phase angle, Frequency and many more.
X0	Start value of input
X1	Elbow value of input
X2	End value of input
Y	Output DC Voltage / DC Current
Y0	Start value of output DC Voltage / DC Current
Y1	Elbow value of output DC Voltage / DC Current
Y2	End value of output DC Voltage / DC Current
R _N	Rated value of output burden
F _N	Nominal Frequency

Programming

Programming of transducer can be done in 2 ways

- Programming Via Optional RS485(MODBUS) Communication.
- Programming Via USB port at front of the Transducer using USB cable. The programming by this method can also be done without aux supply(power from USB).
- For Programming the transducer by any of the above two methods configuration software can be used which is provided on CD along with transducer.
